Dear reader and valued client.

After all the excitement of the World Cup and the festivities during this period, I for one am left with a warm feeling that as South African's we really did a terrific job of showcasing the country in a positive light. The week end of the opening game the practice was robbed of all electronic equipment, CD's with software and the backups. We limped along for the first week, and by the 2nd week had the computerised systems up and running again. All the electronic data from January 10 to 14 June 10 had been lost. Between Denise, Dr Gayle, and Kim the data has been captured from hardcopies and the records in your files. Denise is still in the process of making sure that all the accounts are balanced. This has been a very hard and tedious exercise, and lessons have been learnt.

We take this opportunity to thank all our clients for the patience and help during this period, as billing was difficult, and resulted in slow service. If there are any queries relating to your accounts please do not hesitate to bring this to our attention. Help is always appreciated.

The twins are doing very well, and Jenni has even managed to get a run or two in. Dr Jenni, will be consulting one afternoon a week for August from next Wednesday. Although the Lipolite cases procedures are completed in the mornings Dr Gayle is available on a Monday and Dr Dominique is available on Tuesday mornings for consultation. This is in addition to the other days that they have been available before.

Our Dedicated Team: Dr. Jenni Irvine, Dr. Dominique Myburgh, Dr. Gayle O' Kelly, Sr. Lucy Verbeeck, Kim More, Denise Baillie, Julia Magampa, Julie Wright and Alouisa van Wyk

*New Photodynamic therapy to enhance the results of your
treatment.....*

What is Omnilux™ Photodynamic Therapy?

Photodynamic therapy sounds intimidating, but all it means is that a pure light is used to promote skin rejuvenation and enhance healing. It may be used on its own or in conjunction with other treatments to enhance the overall results of the treatment.

Why would the Omnilux™ Photodynamic Therapy be used?

It is painless. There is no risk of burns and can be used when treatment with laser is contra-indicated

What would the Omnilux™ Photodynamic Therapy be used to treat?

For the treatment of non melanoma skin cancers, acne, and photo damaged skins. Activation of cell receptors present in the mitochondria or on the cell membrane lead to increased cell metabolism. This type of reaction is stimulated by the Omnilux™ and results in skin rejuvenation, wound healing, psoriasis treatment, tissue regeneration.

The Aesthetics Centre recommends using the Omnilux in conjunction to the following procedures;

- For anti aging and skin rejuvenation as a stand alone treatment
- To reduce bruising after the Laser lipolysis procedure
- Heal fever blisters and Psoriasis
- Enhance the rejuvenation after a chemical peel
- Enhance the rejuvenation and healing after Elos Laser Treatment
- To potentiate the effect of your Botox® and Filler

For a complimentary beauty Taste Test all peels will be followed by 15 minutes with the healing light of the Omnilux™

See you soon.....
